

**8 May 2023**

# Addressing the rising burden of liver disease in Australia through collaboration and innovation

## Event Overview

Liver disease affects up to 1 in 3 Australian adults, and costs Australia upwards of \$51 billion each year. While this burden on our health system continues to grow, the majority of liver disease is preventable.

This event will bring together experts in liver disease, as well as those with lived experience and advocates for better liver health, to share the latest evidence and research in liver disease, and discuss what needs to change to improve Australia's liver health.

A roundtable discussion with all attendees will explore current barriers, and determine key recommendations for easing the burden of liver disease in Australia.

## Program

**Morning Session:** *Latest research and evidence in liver disease and burden*

**Midday Session:** *Roundtable discussion with attendees*

**Afternoon Session:** *Key Recommendations for policy makers*

## Target Audience

Clinicians, consumers, researchers, advocates, policy makers and stakeholders who hold an interest or expertise in the burden and effects of liver disease in Australia.

**LOCATE  
NAFLD**LOCAl Assessment & Triage  
Evaluation of NAFLDAn NHMRC MRFF Keeping Australians Out of Hospital Project (GNT1175667)  
Led by the Australian Centre for Health Services Innovation at Queensland University of Technology with University of the Sunshine Coast,
