Health professional webinar

Tues 20 June 2023
7:30PM-9:00PM
AEST

**What is normal kidney function
decline as we age?**

CKD becomes more common as individuals age, affecting around 4 out of 10 adults aged over 75. Tune in for this case-based education, as GP Consultant, Dr Chris Bollen explores with you the relationship of kidney function to ageing, the role that CKD plays in the decline of cognition and the clinical management of older people living with the disease.
